TRANSPLUMB EVENTS

Environmental Management Policy

Transplumb Events — Policy Statement

Transplumb Events installs and manages temporary water, wastewater, sewer, gas and hydration infrastructure at major events. Our work can affect waterways, land and the communities around event sites, and we take that responsibility seriously.

The Directors and Senior Management of Transplumb Events are committed to:

- Protecting the environment, including preventing pollution from wastewater, sewage, fuel, chemical and other spills.
- Meeting our compliance obligations, including environmental laws and our clients' and venues' requirements.
- Using water and other resources responsibly, and helping event organisers reduce single-use plastic through drinking water and hydration stations.
- Minimising waste and maximising the reuse of our modular equipment and materials.
- Reducing dust, noise, sediment, litter and other impacts on event sites and their neighbours.
- Identifying and controlling the environmental aspects of our work, including planning for severe weather and climate-related impacts.
- Setting environmental objectives and targets and reviewing our performance against them.
- Training our people and contractors so they understand their environmental responsibilities.
- Continually improving our Environmental Management System, maintained in accordance with AS/NZS ISO 14001.

This policy is communicated to everyone who works with us, is available to our clients and other interested parties, and is reviewed at least annually to make sure it remains right for our business.
